SmartShala App V2.0
Product & UI Blueprint

Principal Portal + Teacher Portal

Goal
A focused school-management experience where each portal shows only what that role needs — keeping the interface simple, fast and uncluttered.

Core UX principle
Important actions stay visible. Secondary actions move into “More”. Creation actions use “+”. Attendance punching uses a real swipe gesture.

1. Decisions We Finalized

Area	Decision
Principal home	Show key school overview and a limited set of quick actions — not every module on one screen.
More	Secondary school-management sections live here instead of overcrowding Home.
+ button	Used for creation/add actions such as adding a student, teacher, class/section, announcement or event.
Teacher portal	Role-specific: attendance, homework, marks, student records, leave, calendar, salary and students needing focus.
Teacher fees	Do not show fee management to teachers.
Messages	Includes teacher leave/status and school announcements.
Attendance punch	Bottom action is a horizontal “Swipe To Punch” control. It is a swipe gesture, not a circular tap button.
Reports	Keep reports focused on academic/operational insights; remove the Finance section from the reports screen.
Visual direction	Clean mobile-first UI, larger readable icons, whitespace, blue SmartShala branding, minimal cards.

2. Principal Portal — Recommended Structure

Home should act as a command center, not a list of every feature.

Home

Today’s overview • Important alerts/notifications • Limited quick actions • Today’s attendance / key school metrics

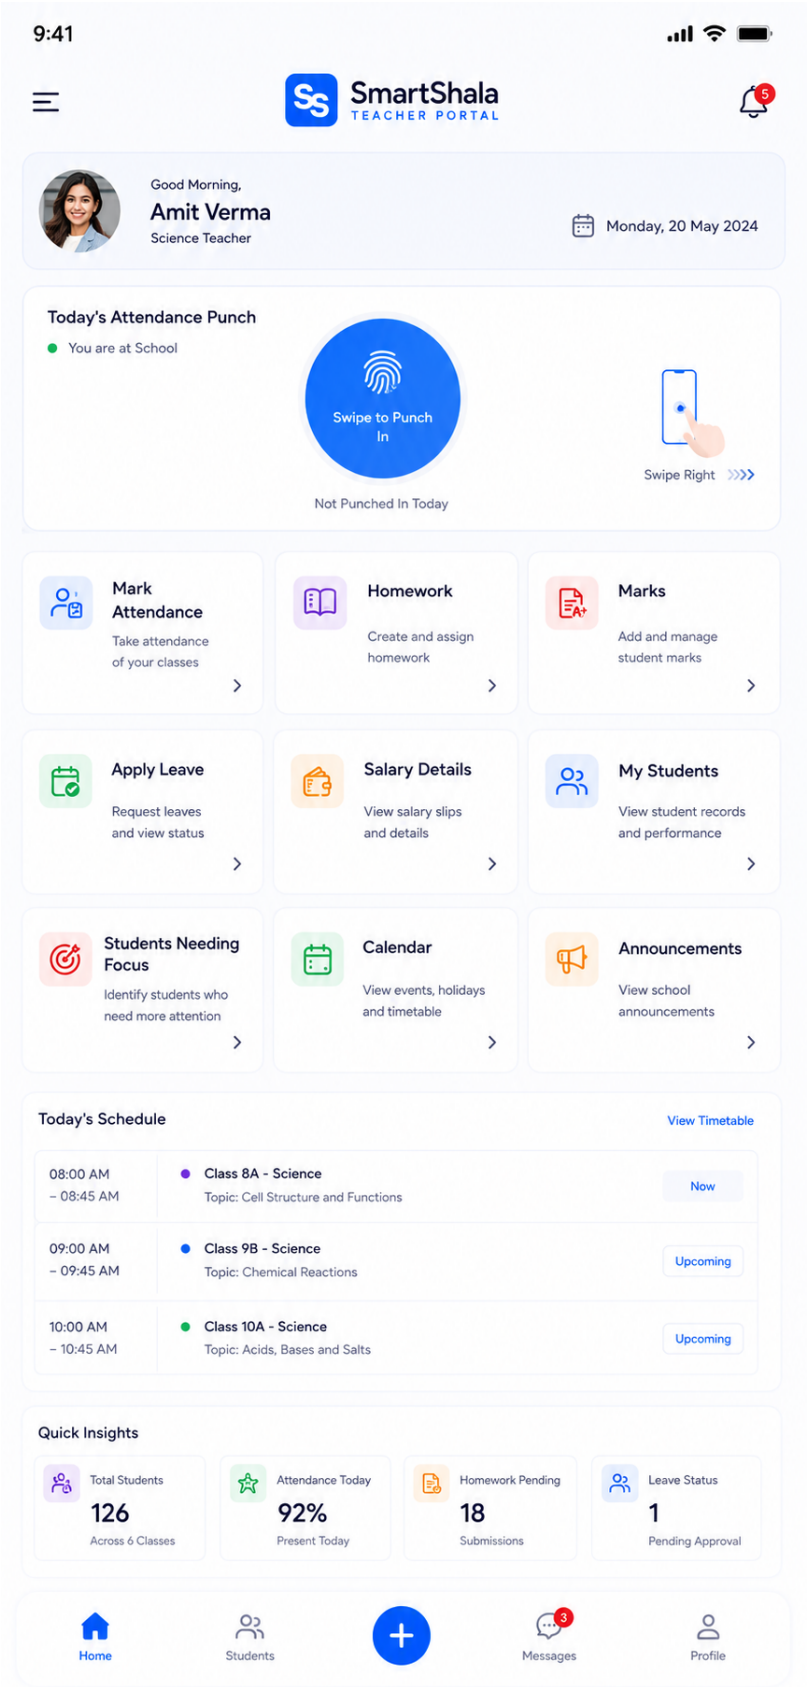

More

School Profile • Teacher Management • Student Management • Classes & Sections • Timetable • Transport • Exams • Reports • Academic Calendar • Leave Approval • Payroll

+ Quick Add

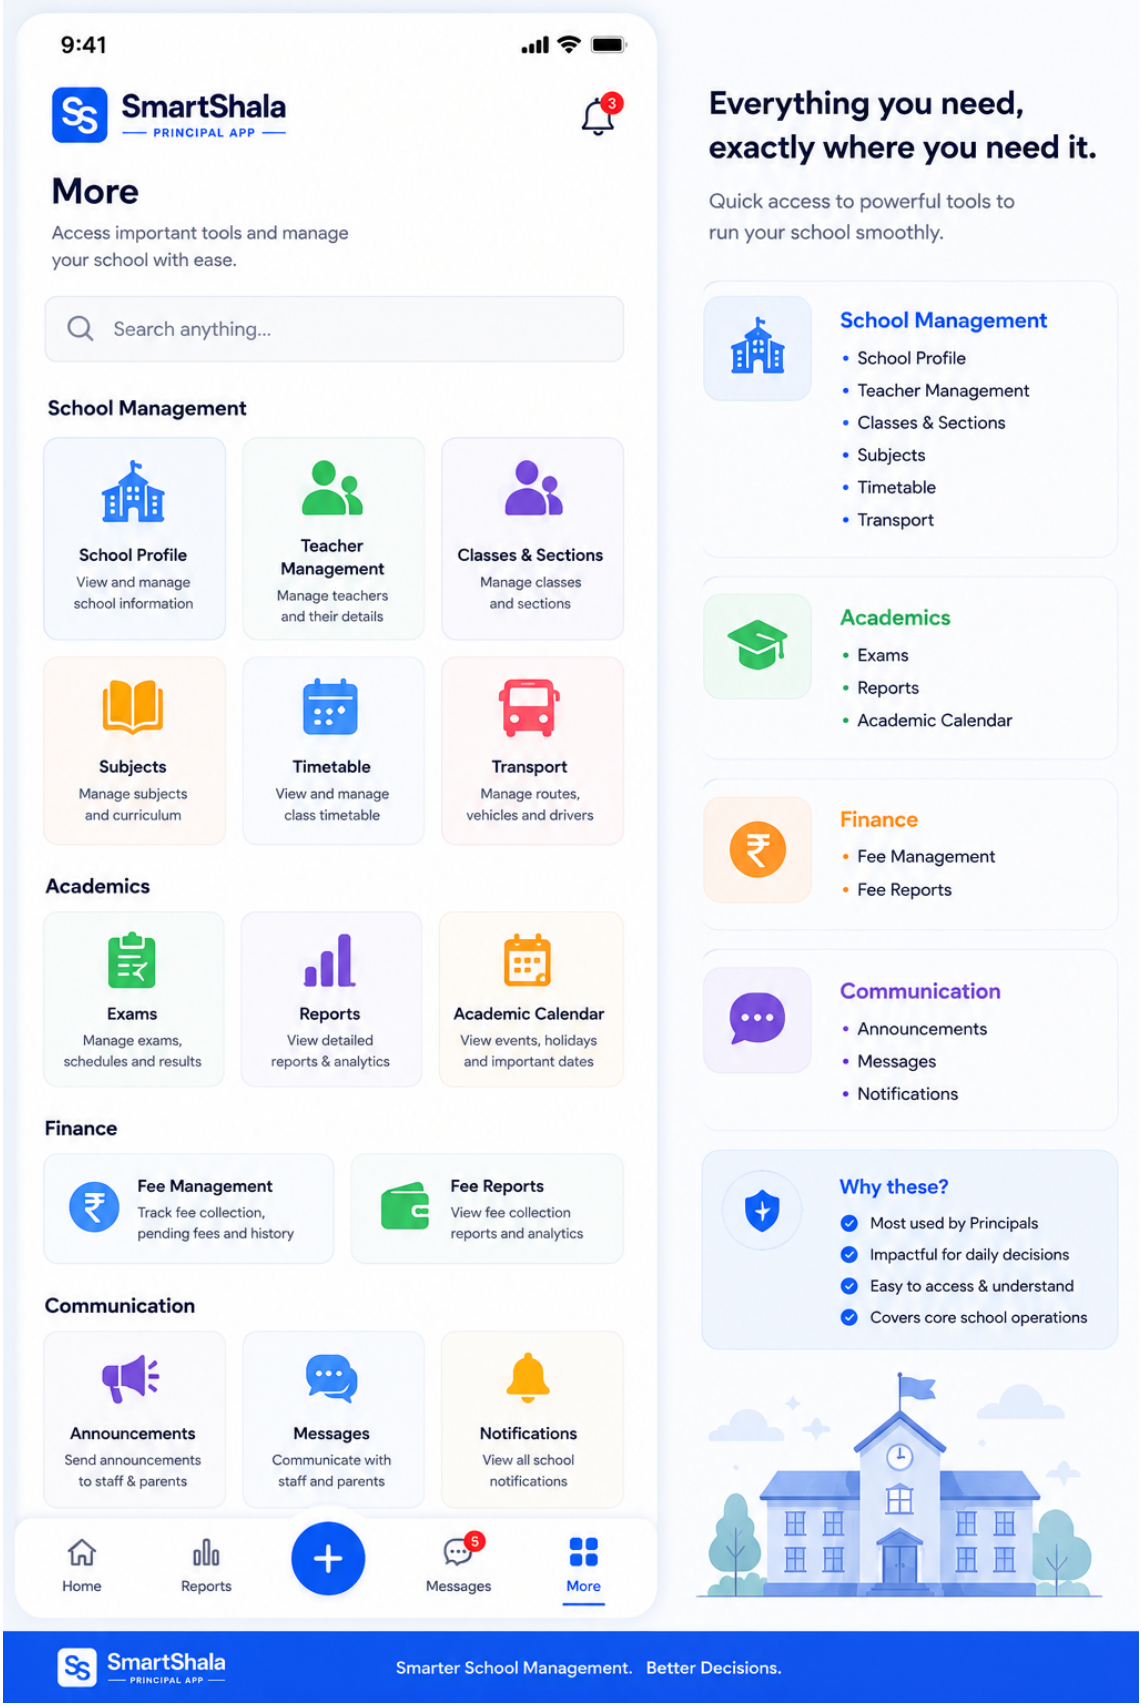

Add Student • Add Teacher • Add Class / Section • Create Announcement • Create Event / Notice

Principal Home / Dashboard

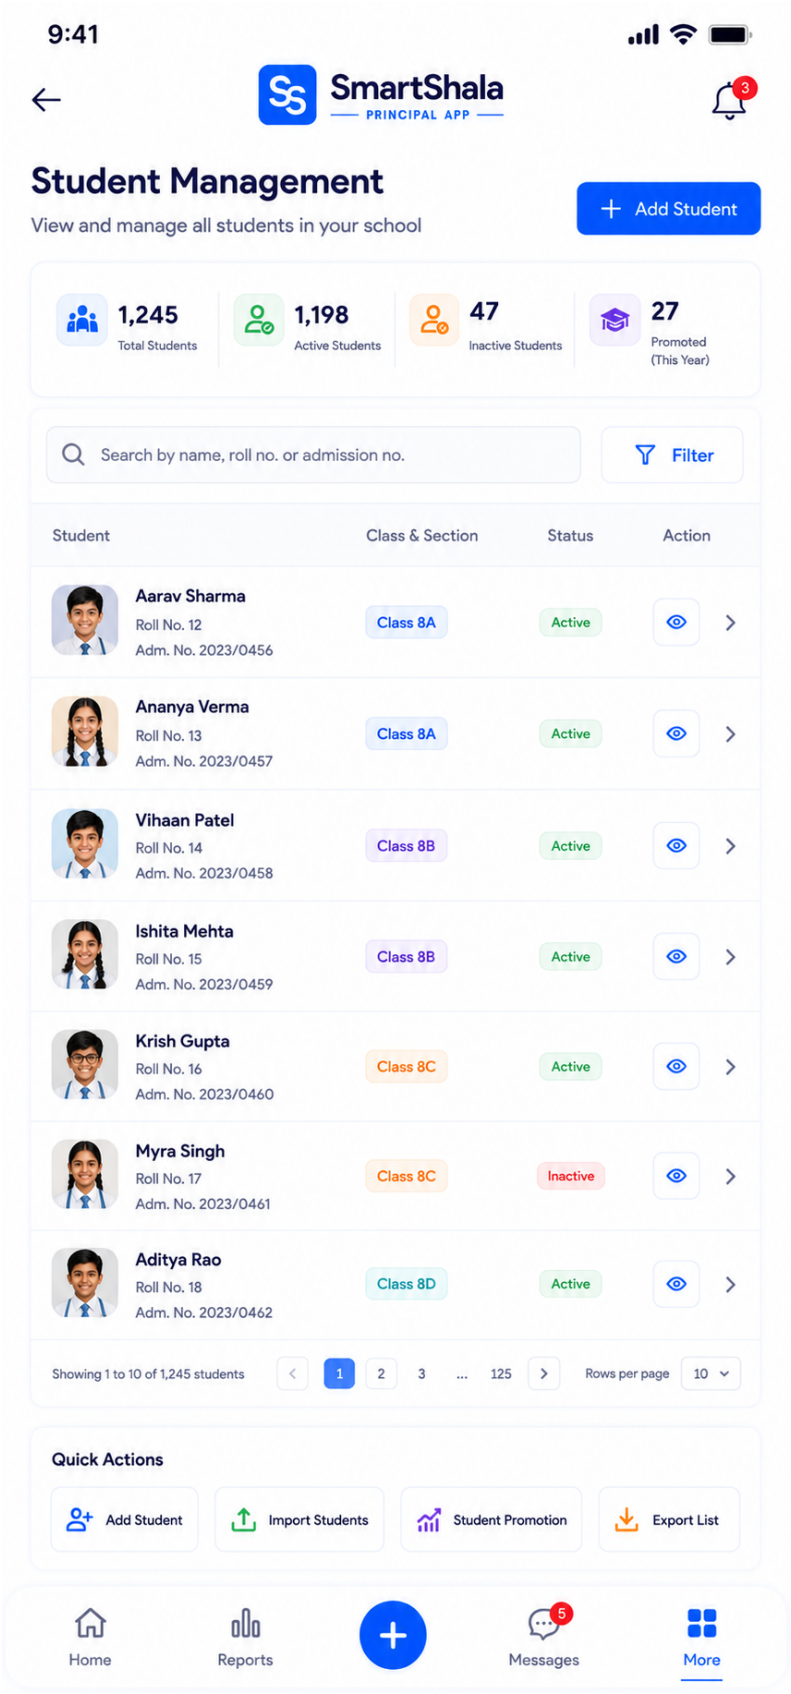

Principal Home / Dashboard — selected UI reference from the work completed today.

More — Secondary Modules

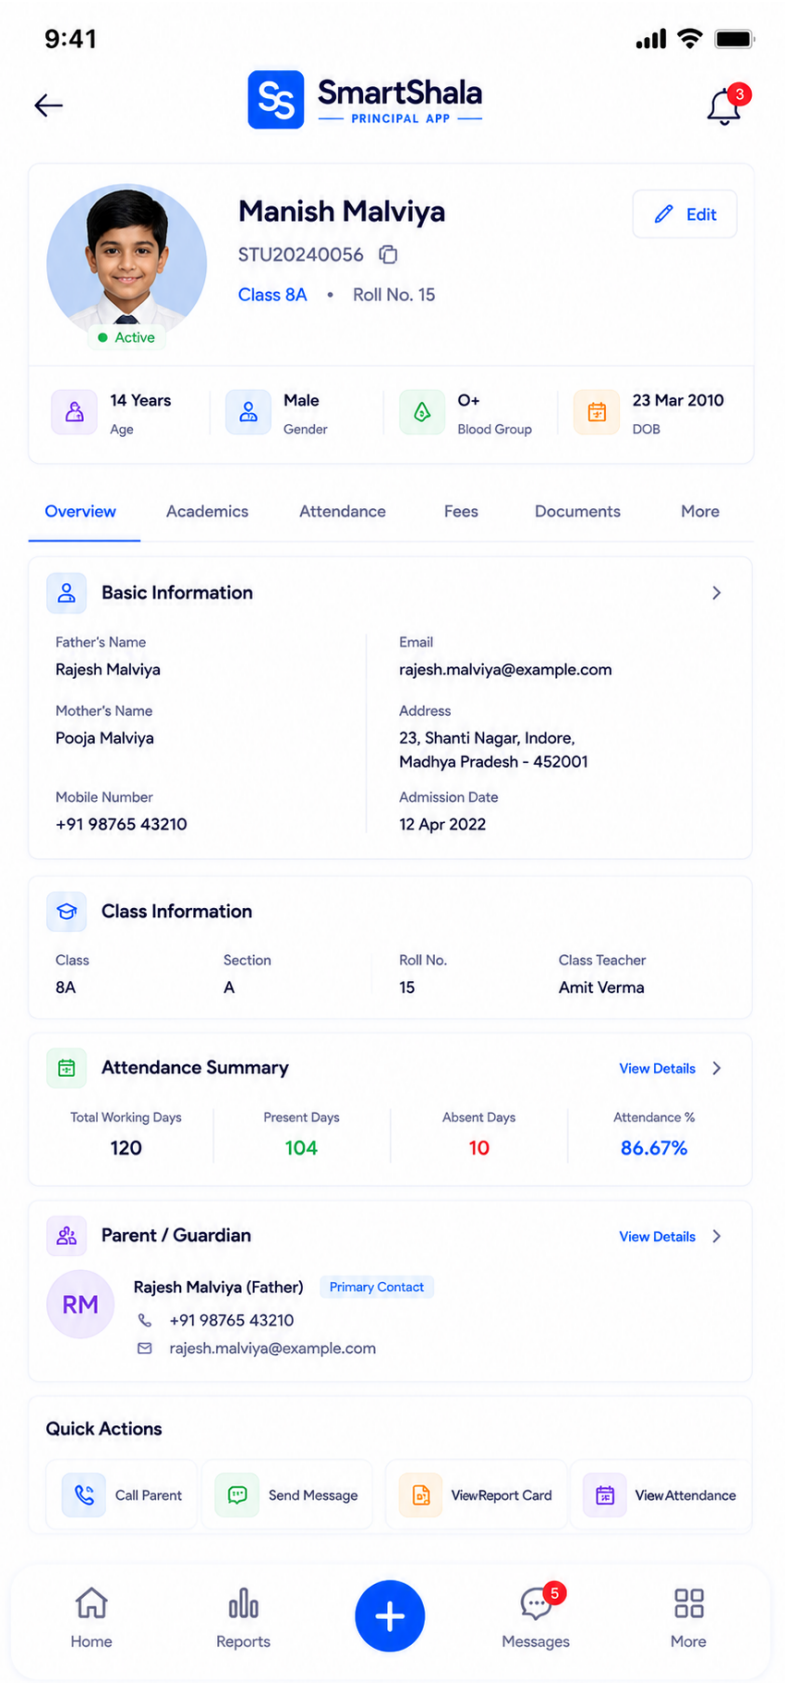

More — Secondary Modules — selected UI reference from the work completed today.

Student Management

Reports — without Finance section

Reports — without Finance section — selected UI reference from the work completed today.

Leave Approval

Leave Approval — selected UI reference from the work completed today.

3. Principal Portal — What NOT to Overload

• Do not put every module on Home.

• Do not repeat the same action in multiple places unless it is a high-frequency task.

• Do not include Finance inside Reports.

• Do not add unnecessary demographic or decorative information to management lists.

• Keep detailed records inside their dedicated profile/detail pages.

• Use More for lower-frequency modules and keep the primary navigation clean.

4. Teacher Portal — Final Feature Set

The teacher experience should be much simpler than the principal portal and should focus on daily teaching work.

Feature	What the teacher can do
Swipe To Punch	Check in/out using a horizontal swipe action fixed above the bottom navigation.
Attendance	Select class, mark present/absent, review the class list and save attendance.
Homework	Create homework, view assigned work and check submissions.
Marks	Enter/update marks and review student/class performance.
My Students	View student records, search students and open individual profiles.
Students Needing Focus	Identify students who may need attention using attendance/performance indicators.
Apply Leave	Choose leave type/date, add reason and submit; status is visible in Messages.
Messages	School announcements plus leave applications/status and important communication.
Calendar	View classes, exams, meetings, school events and important dates.
Salary Details	View personal salary/pay information relevant to the teacher.
Fees	Not available in Teacher Portal.

5. Teacher Portal — Screen Logic

Home

Today’s classes • Today’s overview • Quick actions: Attendance, Homework, Marks, Students, Leave, Focus, Calendar • Next class / upcoming work

Messages

Announcements • Leave applications/status • Important school messages

Bottom action

Swipe To Punch — horizontal swipe only • Never replace it with a tap circle

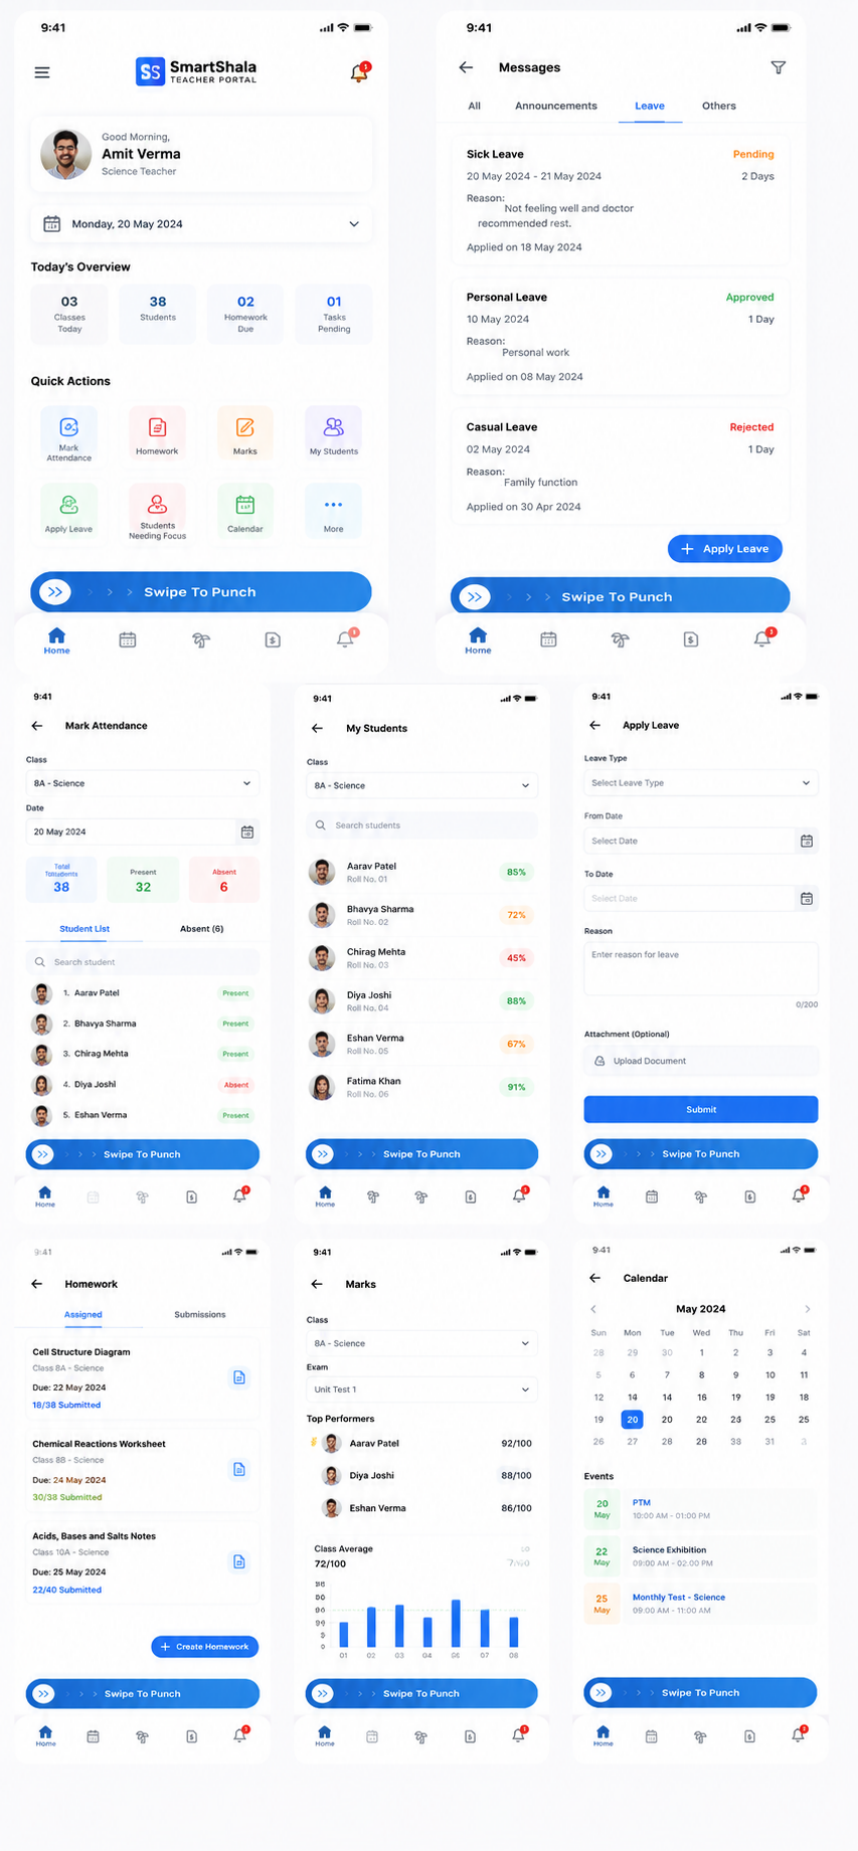

Student record

Academic/attendance-related information • No fee information

More / secondary actions

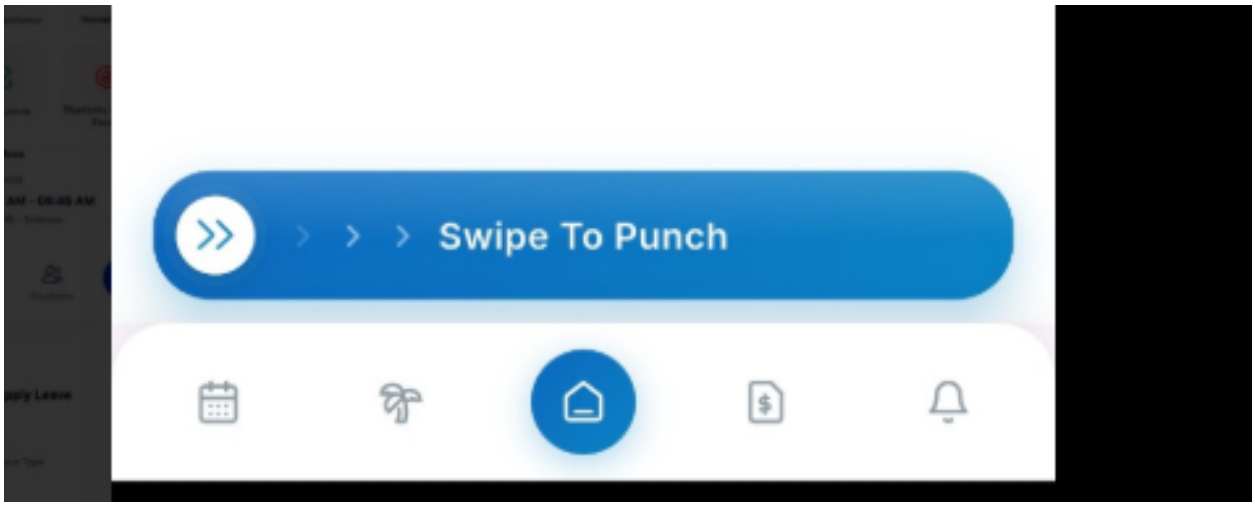

Less-frequent tools should not crowd Home

6. Teacher Portal — Final UI Reference

Final teacher-portal reference generated in this session, including the Swipe To Punch interaction and role-specific screens.

7. Swipe To Punch — Interaction Reference

Reference supplied in the conversation: the punch control sits above bottom navigation and is completed by swiping the handle across the bar.

8. Final V2.0 Product Checklist

■ Principal: Home + More + dedicated detail pages

■ Principal: + Quick Add for creation actions

■ Principal: School Profile

■ Principal: Teacher Management + Teacher Profiles

■ Principal: Student Management + Student Profiles

■ Principal: Fees Management

■ Principal: Classes & Sections

■ Principal: Timetable

■ Principal: Transport

■ Principal: Exams

■ Principal: Academic Calendar

■ Principal: Leave Approval

■ Principal: Payroll

■ Principal: Reports without Finance section

■ Teacher: Swipe To Punch

■ Teacher: Attendance

■ Teacher: Homework

■ Teacher: Marks

■ Teacher: Student Records (no fees)

■ Teacher: Students Needing Focus

■ Teacher: Leave

■ Teacher: Messages

■ Teacher: Calendar

■ Teacher: Salary Details

■ UI: Keep screens focused and avoid overcrowding

Recommended next step: turn this blueprint into a clickable prototype and validate the Home → More → Detail flows before development.
